Light Damage is Handicapping the Museum Industry — Costing Millions

Museums worldwide have thousands of manuscripts, paintings, textiles and collectibles that are kept in storage and vaults to protect them from light damage. But let's face it, you didn't amass your collections to keep them from the public for all but a few days or weeks. You also didn't acquire these artifacts to present them in dimly lit halls. The cost of storage, restoration and lost revenue opportunities has become a financial burden for many institutions.

VariGuard SmartGlass

- ▶ Allow light to reach artifacts only when they are being viewed
- ▶ Block light and protect artifacts at all other times

Protects Artifacts Already on Display

- ▶ Block up to 99.5% of visible light exposure and damage
- ▶ Block 99%+ of harmful UV light exposure
- ▶ Provide the best overall protection for artifacts in your collection and those on loan

Emancipates Artifacts from Storage

- ▶ Showcase artifacts once considered too light-sensitive to exhibit
- ▶ Extend the duration of exhibitions
- ▶ Increase museum visitation and potential revenue

Provides Exciting Visitor Experiences

- ▶ VariGuard's tinting capabilities offer more dynamic and entertaining viewing experiences for visitors
- ▶ Integrate VariGuard with motion-activated controllers for precisely timed artifact visibility

Improves Security

- ▶ Laminated design strengthens the display panel, provides privacy and helps minimize risk of theft

Applications

- ▶ Freestanding, wall and table top display cases
- ▶ Picture frames
- ▶ Partitions

Available with high-performance anti-reflection properties

Upgrade Your Existing Displays

You can keep your existing displays. VariGuard SmartGlass can replace your existing glass for a fraction of the price of purchasing a new system.

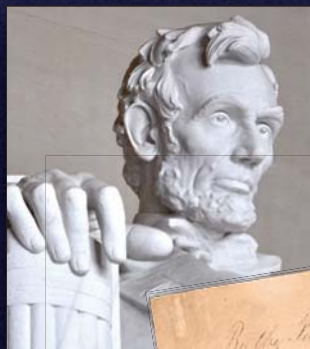

Look at What Others are Saying About VariGuard:

"Our Connecting Cultures exhibition includes three display cases made with VariGuard. These electronic 'curtains' are being used to protect and extend the exhibition period of a 17th century atlas, an 18th century Indian map printed on cotton, and an Incan wool tunic. By simply pushing a button the VariGuard glazing instantly changes from light-blocking to transparent and the work is magically accessible to museum visitors."

Matthew Yokobosky
Chief Designer
Brooklyn Museum

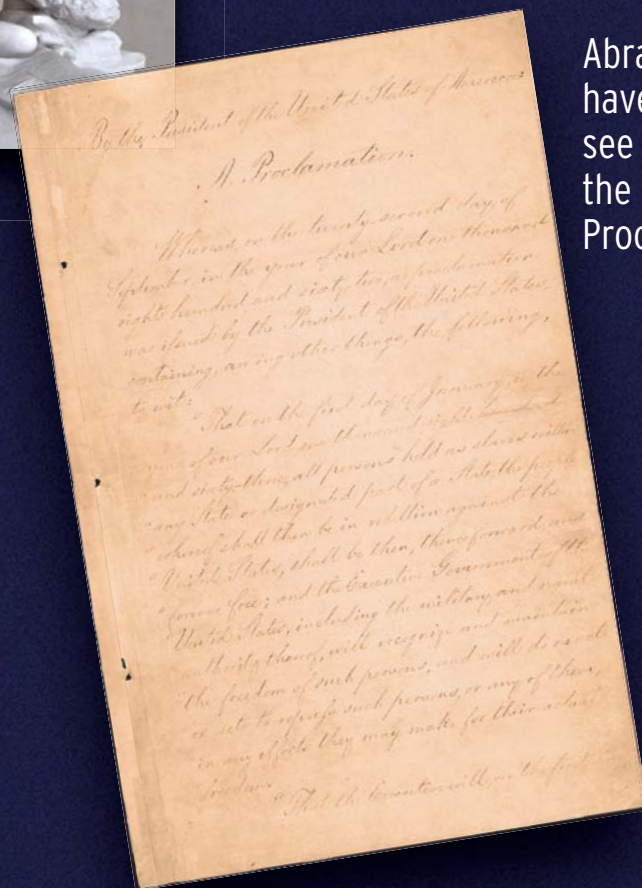

"Domoticware's display cases made with VariGuard SmartGlass allow museums to achieve an optimal balance between the conservation and exhibition of light-sensitive works of art. These cases, including one being used by the Museum of the Spanish Guitar, can eliminate all other light reduction costs such as object rotation schemes and UV window filters."

Mr. Manoj M. Phatak, C.Eng.
Founder & CEO
Domoticware S.L.U.

Don't Let Light Damage Destroy Your Collection

Abraham Lincoln would have been saddened to see how light damaged the Emancipation Proclamation over time.

Join the Revolution:

- ▶ Protect your Manuscripts, Books, Textiles and Paintings
- ▶ Give your Artifacts the Exposure they Deserve
- ▶ Increase Revenues by Maximizing Exhibit Time for Special Artifacts
- ▶ Save on Storage Fees, Time and Effort Associated with Managing Light Exposure

VariGuard SmartGlass offers the best protection against light damage for your precious artifacts.
